1.Introduction

The family Cyperaceae are Predominantly monoecious herbs ,often of seasonally or permanently wet habitates.A cosmopolitan family of about 90 genera and 4000 species .The species *Cyperus alternifolius L.* is Tropical and S. Africa , Madagascar[1]. The genus Cyperus has about 550 species ,It's widely distributed in many place of the world [2]. One of the species is *Cyperus alternifolius L* (umbrella sedge),It's perennial ,the height 1.5 meters. Stems are cylindrical, green and smooth. Leaves are linear, the longs are up to 20 centimeters . Flowers are green, small, and clustered (2 French faux papyrus (Berhaut). plant Medicines: generally healing root Medicines: stomach troubles leaf root Phytochemistry: alkaloids Agri-horticulture: ornamental: fodder Social: religion, superstitions, magic Social: sayings, aphorisms[3]

There have been few publications on the chemical composition of *Cyperus alternifolius L.* ,Ahmed has isolated Forty compounds representing in the flowers 98 % of the oil were characterized. Sesquiterpenes constituted the bulk of the oil (ca. 62 %); the major components of the oil were α-cyperone 19.6 %, β-selinene 9.8 %, caryophyllene oxide 7.2 % and cyperene 5.2 %. [4], then Awaad *et al* were isolate Eight phenolic compounds from *C. alternifolius* that useful as Hepatoprotective activity[5], Usharani and Vasudevan was designed to determine the phytocomponents in the root exudates of *C. alternifolius* under heavy metal stress[6].but There have no publications on the aerial part of *Cyperus alternifolius L.* in Iraq that determinate the bioactive phytochemical compounds identified by GC-MS. The aim of this paper was to determine the composition of the bioactive phytochemical compounds from *Cyperus alternifolius L.* A literature survey revealed that the bioactive phytochemical compounds of *Cyperus alternifolius L.* from Iraq has not been previously studied. So we decided to examine this compound.

2.Materials and Methods

2.1.Collection and preparation of plant materials

Cyperus alternifolius L. Leaves were collected from different localities in the central and south of Iraq. Then the leaves were cleaned and washed with tap water then with distilled water and dried under shade for two weeks at room temperature . Eighteen gram of plants powdered were taken in forty ml methanol and then filtered .

2.2. Gas chromatography – mass spectrum (GC/MS) analysis.

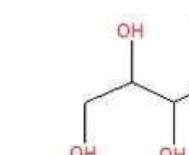

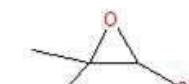

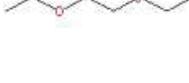

Cyperus alternifolius L. GC-MS analysis were carried out in a (QP 2010 Plus SHIMADZU) instrument under computer control at 70 eV. About 1 μ L of them ethanol extract was injected into the GC-MS for 45minutes . The temperature of the oven was 100 C an eluent. The column type: Elite 1 (100% dimethyl poly siloxane) for separation the components . Compounds were identified by comparing their spectra to those of the Wiley and NIST/EPA/NIH mass spectral libraries. Imad *et al.* Method was followed in (GC/MS) analysis(7) .
